THE JOURNAL OF MATHEMATICAL BEHAVIOR

VOLUME 24 2005

TITLE INDEX

A

A mathematical competition as a problem solving and a mathematical education experience. Lucia Grugnetti and François Jaquet, 3–4: 373

An investigation of statistical thinking in two different contexts: Detecting a signal in a noisy process and determining a typical value. Randall E. Groth, 2: 109

B

Building bridges within mathematics education: Teaching, research, and instructional design. Susan Magidson, 2: 135

C

Conditions for promoting reasoning in problem solving: Insights from a longitudinal study. John M. Francisco and Carolyn A. Maher, 3–4: 361

H

How students structure their investigations and learn mathematics: insights from a long-term study. Carolyn A. Maher, 1: 1

How fragile is consolidated knowledge? Ben's comparisons of infinite sets. Pessia Tsamir and Tommy Dreyfus, 1: 15

L

Learning to teach high school mathematics: Patterns of growth in understanding right triangle trigonometry during lesson plan study. Laurie O. Cavey and Sarah B. Berenson, 2: 171

M

Mathematical problem solving and learning mathematics: What we expect students to obtain. Kazuhiko Nunokawa, 3–4: 325

Mathematical problem solving: What we know and where we are going. Jinfa Cai, Joanna Mamona-Downs and Keith Weber, 3–4: 217

Moving from rhetoric to praxis: Issues faced by teachers in having students consider multiple solutions for problems in the mathematics classroom. Edward A. Silver, Hala Ghousseini, Dana Gosen, Charalambos Charalambous and Beatriz T. Font Strawhun, 3–4: 287

O

On the pedagogical insight of mathematicians: 'Interaction' and 'transition from the concrete to the abstract.' Paola Iannone and Elena Nardi, 2: 191

P

Peer interactions in a computer lab: reflections on results of a case study involving web-based dynamic geometry sketches. Margaret P. Sinclair, 1: 89

Planning teaching an unfamiliar mathematics problem: The role of teachers' experience in solving the problem and watching pupils solving it. Roza Leikin and Sally Kawass, 3–4: 253

Problem solving in technology rich contexts: Mathematics sense making in out-of-school environments. Tom Lowrie, 3–4: 275

Problem-solving, proving, and learning: The relationship between problem-solving processes and learning opportunities in the activity of proof construction. Keith Weber, 3–4: 351

Proof validation in real analysis: Inferring and checking warrants. Lara Alcock and Keith Weber, 2: 125

S

Solution representations and pedagogical representations in Chinese and U.S. classrooms. Jinfa Cai and Frank K. Lester, Jr., 3–4: 221

Students' reflections on their learning experiences: lessons from a longitudinal study on the development of mathematical ideas and reasoning. John M. Francisco, 1: 51

T

Teachers' pedagogies and their impact on students' mathematical problem solving. Kai Fai Ho and John G. Hedberg, 3–4: 238

Teaching arithmetic to low-performing, low-SES first graders. Constance Kamii, Judith Rummelsburg and Amy Kari, 1: 39

doi:10.1016/S0732-3123(05)00053-2

The evolution of mathematical explorations in open-ended problem-solving situations. Victor V. Cifarelli and Jinfa Cai, 3–4: 302
The identity of problem solving. Joanna Mamona-Downs and Martin Downs, 3–4: 385
The place of problem solving in contemporary mathematics curriculum documents. Kaye Stacey, 3–4: 341
The powers and pitfalls of algorithmic knowledge: a case study. Caroline Brayer Ebby, 1: 73
